

Water Reporter is

A social network for environmental groups that connects individuals and watershed organizations working to improve and celebrate their watersheds. Harpeth River Watershed Association uses Water Reporter to identify pollution hotspots, mobilize volunteers, and capture the beauty of the Harpeth River. Join us and help reinforce a culture of community ownership in our watershed.

Getting Started

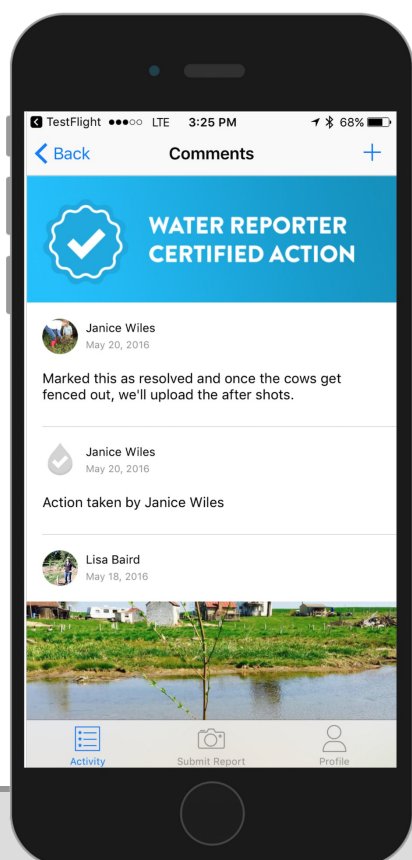

Download the Water Reporter app to your mobile device. Create an account and follow these simple steps to start submitting reports.

- 1 Choose a photo from your phone or take one here.
- 2 Write a few words and add hashtags to describe and categorize your report.
- 3 If necessary, you can change the report date.
- 4 The pinpoint directs you to a map with the report location. Confirm your spot or move the map to change the location.
- 5 Toggle on the organization(s) you want to be notified of the report.
- 6 Submit your report. It will be added to the community feed, shared with the linked organization(s) and added to your profile.

How Water Reporter Works

Thanks to geo-location services embedded in every report, Water Reporter seamlessly notifies environmental groups tracking issues and results in the watersheds that they care about. The platform displays each submission on a map and on profile, organization, and watershed feeds. To stay in the loop, you will get email notifications every time someone comments or takes action on a report that you submit.

Submit a Report With a Hashtag Comment

The comments field gives you an opportunity to describe more about your photo. Include hashtags to further improve search and categorization of your report for the community and your local Riverkeeper. Include the following hashtags:

- | | |
|---------------------|---|
| #HarpethRiver | Share beautiful photos of the Harpeth |
| #Algae | Report algae blooms |
| #Erosion | Identify erosion or runoff issues |
| #Litter | Help us locate areas in need of cleanup |
| #Pollution | Identify water quality issues |
| #BeRiverResponsible | Show us responsible river recreation |
